Mattress Height Guide

Mattress Name: _____

Approximate Mattress Height: _____ Normal Foundation Height: _____ Low Foundation Height: _____

When comparing the height of a new mattress set to an existing set that is placed upon a standard metal bed frame, please measure up from the bottom of your existing box spring and not from the floor. Your metal bed frame may not be the same distance from the floor as the metal bed frames in our showroom and we want to be as accurate as possible with our height comparison.

If your existing mattress set is placed upon a bed set, compare your new mattress set dimensions by measuring up from the cross slats of your current bed set. Be sure to allow an inch or two for your blankets, comforter, pillows and the small variation in height that's common in mattresses.

If you option for a low profile foundation, realize there is no difference in quality or support as compared to a normal height foundation. If you use a bed skirt, it may require shortening should you select a low profile foundation.

Our customers often comment that the mattresses look thicker at home than they do in our showroom, so please take your time when comparing the height of any new mattress set to your existing mattress set. Your mattress warranty doesn't allow for exchanges due to mattress set height preferences.
