King Rotation Guide

King mattresses require a slightly different rotation pattern than twins, fulls, or queens. People tend to sleep less in the center of a king mattress, sometimes resulting in a bit of a firmer or higher area in the middle of the product. To help alleviate this common condition, we've created a specialized 90-degree rotation pattern that should be used with all new king mattresses. This unique pattern of 90-degree rotations will help all of the foams in a new king mattress break-in at an even rate and create a more level sleep surface. A king mattress is not a perfect square (76" x 80"), but the small side overhang during these 90-degree rotations will be minimal and not cause damage.

Ideally, rotate a new king mattress as follows for the first three months:

- **Week 1:** Keep mattress normally orientated. Maintain for two weeks.
- **Week 3:** Rotate the mattress 90 degrees clockwise.
- **Week 4:** Rotate the mattress another 90 degrees clockwise. Maintain for two weeks.
- **Week 6:** Rotate the mattress 90 degrees clockwise.
- **Week 7:** Rotate (or flip if two-sided) the mattress another 90 degrees clockwise. Maintain for two weeks.
- **Week 9:** Rotate the mattress 90 degree clockwise.
- **Week 10:** Rotate the mattress another 90 degrees clockwise. Maintain for two weeks.
- **Week 12:** Rotate the mattress 90 degrees clockwise.
- **Week 13:** Rotate (or flip if two-sided) the mattress another 90 degrees clockwise.

A new mattress takes approximately three months to break-in. Newer foams are designed to conform and soften slightly and have a certain degree of memory, so it's normal to observe some body impressions.

Once your king mattress is broken-in, we recommend you spin the mattress 180 degrees (or flip it if it's two-sided) once a month. If you notice a small high spot developing near the center of the mattress, simply rotate it 90 degrees for a week or two. After this time spin the mattress back to its correct orientation and continue with the normal rotation process.
